Pesticide Biochemistry and Physiology

AN INTERNATIONAL JOURNAL

Editor: E. Y. SPENCER

PESTICIDE BIOCHEMISTRY AND PHYSIOLOGY publishes original research papers in English, dealing with the biochemistry and physiology of insecticides, herbicides, fungicides, acaricides, nematocides, rodenticides and similar compounds, including nonlethal pest control agents such as antifeeding compounds and chemosterilants as well as the biosynthesis of pheromones, hormones and plant resistant agents. Topics of interest include the effects of these agents on the biochemistry and physiology of both target and nontarget organisms, and the biochemical transformations of the agents themselves. Mechanisms of resistance, and interactions such as synergism and antagonism, are also discussed in this important publication.
